

Results-driven Java Developer with 2 years of experience in building and maintaining scalable web applications using Java, Spring Boot, RESTful APIs, and MySQL. Strong expertise in backend development, database design, and API integration, with a solid focus on clean code, debugging, and performance optimization. Proficient in Git/GitHub, Postman, and Agile tools like Jira, with working knowledge of CI/CD pipelines, microservices architecture, and cloud deployment concepts. Passionate about delivering efficient, maintainable, and high-performance software solutions that enhance user experience and drive business productivity.

SKILLS

Languages	Java, SQL, C, C++
Frameworks & Tools	Spring Boot, Hibernate, JPA, Maven, Git, Postman
Database	MySQL
Other Skills	RESTful APIs, Jira, CI/CD (Conceptual), Agile Methodologies

TECHNICAL EXPERIENCE

Java Developer Ananta Services	Jan 2024 — Dec 2025 Vadodara, India
- Designed, developed, and deployed enterprise-level applications using Java, Spring Boot, Hibernate, and REST APIs, improving backend scalability and system performance. - Built and optimized MySQL database schemas and queries, reducing data retrieval time by 30% through efficient indexing and caching techniques. - Implemented secure authentication workflows and role-based access control (RBAC) using Spring Security to ensure robust user management. - Performed API integration testing using Postman to validate endpoints and ensure seamless communication between frontend and backend services. - Managed source code with Git and GitHub, following clean branching strategies and version-control best practices. - Collaborated with frontend, QA, and product teams in an Agile Scrum environment, participating in sprint planning, daily standups, and issue tracking via Jira. - Contributed to CI/CD pipeline discussions to enhance deployment automation, release reliability, and overall DevOps workflow efficiency.	

EDUCATION

Education	
Bachelor of Technology in Computer Science & Engineering, ITM Universe	Sept 2020 — May 2023 CGPA: 7.3

PROJECTS

Interview Management System Enterprise HR Interview Automation Platform	2024 Company Project
- Developed a full-scale interview scheduling and management application using Java, Spring Boot, MySQL, JPA/Hibernate, and REST APIs. - Designed and implemented modular REST endpoints for candidate management, interviewer allocation, scheduling workflows, and feedback collection. - Integrated MySQL with JPA/Hibernate ORM to ensure efficient, reliable data persistence and optimized query execution. - Implemented authentication and role-based access control (RBAC) to secure access for HR admins, interviewers, and candidates. - Performed API testing using Postman to validate request/response cycles and ensure seamless communication with frontend systems. - Improved backend performance by optimizing queries and introducing caching (Spring Cache/Redis), resulting in 30% faster response times. - Documented APIs using Swagger for easier integration and faster adoption by frontend and QA teams. - Collaborated with frontend, QA, and DevOps teams to deploy the application on a test server for real-time validation and user acceptance testing.	
Impact: - Reduced manual scheduling time by 40% through end-to-end workflow automation. - Enhanced system scalability, enabling parallel interview scheduling across multiple departments.
